# Amasty Extension
Installation Guide

for Magento 2.x

1. Unpack the extension ZIP file on your computer.

2. Connect to your website source folder with FTP/SFTP/SSH client and **upload all** the files and folders from the extension package to the corresponding **root folder** of your Magento installation:

> Please use the "**Merge**" upload mode. Do not replace the whole folders, but merge them. This way your FTP/SFTP client will only add new files. This mode is used by default by most of FTP/SFTP clients software. For MacOS it's recommended to use Transmit. If you install several extensions from Amasty, they will contain same files from the Base package — feel free to overwrite them, these are system files used by all our extensions.

3. Connect to your Magento directory with SSH.

4. Run 3 following commands:

php bin/magento module:enable Amasty_Base Amasty_Modulename

```
user@55m:/var/www/store$ php bin/magento module:enable Amasty_Base Amasty_Modulename
```

Please replace the 'Amasty_Modulename' with the current modulename.

php bin/magento setup:upgrade

```
user@55m:/var/www/store$ php bin/magento setup:upgrade
```

Clear previously generated JS code

```
user@55m:/var/www/store$ rm pub/static/_requirejs/frontend/Magento/luma/en_US/requirejs-config.js
```

Where "luma" is your current active theme.

5. Go to System — Cache Management page on your Magento backend and click the "Flush Magento Cache" button. After this action, the extension is installed.
